CHALLENGE. EVERY DAY.
the innovation

The perfect package

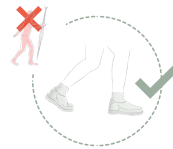

At Alpina, we always follow trends and pave the way for new technologies that enable us to develop products that are at the very top of the world in terms of quality and functionality.

FOR SKIING ONLY

This boot was designed to be the ultimate XC racing ski boot.

- The boot is designed for maximum skiing performance.
- We use carbon parts, which have been shaped to create the perfect balance between performance and fit.
- Carbon adds stiffness and support where it's most needed, and is extremely lightweight – but needs special care, particularly when not out on the trails.

WHEN NOT ON THE TRAIL, ALWAYS USE OVERSHOES

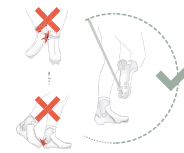

Always use the boots together with the overshoes when not skiing.

- Direct contact with concrete, asphalt, ice, sand, rock, stairs and any sharp objects can damage, even break the carbon outsole.

DO NOT BEND OR TWIST THE BOOT BY HAND

Never bend or twist the boots by hand.

- Extreme bending or twisting of an empty boot (as shown in the figure) can result in damage, even breakage of the carbon elements.
- Always put the boot on to get a feel for its remarkable flex characteristics.

DO NOT KNOCK THE BOOTS TOGETHER

Before stepping into the ski binding, clean the carbon sole carefully, by hand.

- Similarly, clean the snow and dirt from the sole cleats by hand or with a ski pole.
- Do not tap or knock the boots against each other or any other hard or sharp surfaces.

TRANSPORT BOOTS WITH CARE

During transport, always make sure not to place heavy bags or other heavy objects on top of the boots.

- This could damage the carbon cuff or the carbon outsole.

HELPFUL HINTS FOR PROPER USE AND CARE

TREAT YOUR BOOTS WITH CARE

Clean boots with a soft, moist cloth or soft brush and water. Never use chemical cleaning agents nor wash in a machine.

FOR LONGER PRODUCT LIFE

Boots should be cleaned on a regular basis. Boots should be dried after each use to prevent the build-up of odours.

DRYING THE BOOTS

Dry at room temperature, without the aid of an external heat source. Stuff boots with old newspaper; place at a safe distance from a mild source of heat – never in direct contact with any heat source; remove wet newspaper and repeat.

GUIDE TO A GOOD BOOT CARE

ANATOMY AND INNOVATION

XC BOOT TECHNOLOGY

CONSTRUCTION

We have developed many ways of making boots for different segments of cross-country skiing. The differences between World Cup competitors' and recreational users' needs and wishes are significant, so it is necessary to adapt the shoe to each segment. World Cup competitors need extreme lightness and breathability of the shoe, while back-country explorers need warmth and a high level of stability. In all the different segments throughout the manufacturing process, we use the knowledge that ultimately provides the best results to every user of our boots.

RACING ELITE	The shoe is constructed with one-piece full-carbon chassis and a full-carbon cuff. All of the boots are made in SLOVENIJA. The split racing sole tip and heel are fully integrated into the chassis of the shoe. It has an anatomic ultra lightweight and racy inner shoe, combined with a breathable ultralight gaiter. At the end of the process, the shoe is wrapped in special TPU foil that will prevent the water from coming into the shoe but will allow a high level of breathability for top racing performance.
RACING SOLE	Our PRO, Comp, and Racing line are constructed on the sole rather than chassis like Elite 3.0 line. All the boots are equipped with our in-house-made ALPINA Soles, which will give you the whole package of ALPINA performance. Difer complex materials differ from Full-carbon to TPU and are chosen to provide the best performances with similar technologies at different price points.
BC BOOTIE PRO	Full bootie construction of the boot ensures your feet are 360° surrounded with breathable waterproof materials and isolated for cold days. In the first phase of production, the so-called sock is produced and later united with the rest of the boot components to ensure the highest level of fit and performance.
BC PRIME	Full bootie construction of the boot ensures your feet are 360° surrounded with breathable waterproof materials and isolated for cold days. In the first phase of production, the so-called sock is produced and later united with the rest of the boot components to ensure the highest level of fit and performance.
TOURING PRIME	All TOURING shoes use Alpina Touring PRIME construction and combine Alpina or Rottefella outer soles. The specific of this glued construction is great comfort and isolation throughout everyday use while staying price-performance oriented.

ALPINA'S FREE-FEET TECHNOLOGY

Research and testing have shown us that feet move in a specific way while practicing cross-country skiing, and our boots can help you with that. Alpina's "Free-Feet" technology virtually eliminates foot stress, providing the skier maximum comfort and performance. This is accomplished with a unique design and manufacturing process to give you feet freedom and all the support you need at any given moment.

OUTSOLES

ACTIVE GRIP

The 10mm offset of the front metal bar part of the Alpina PRO CLASSIC sole will enable you to get more out of every kick you make. No matter what, you will enjoy classic technique more than ever with Alpina Active GRIP technology.

OUTSOLES

Outsole type and construction are chosen individually for each boot based on its features and functional requirements. We have used years of experience and knowledge from our R&D department and years of collaboration with World cup athletes to develop Alpina outsoles for both Skate and Classic techniques with specific characteristics. We are happy to choose the best options for every shoe.

ALPINA ELITE CLASSIC CHASSIS with integrated split Classic sole

Material Chassis: FULL CARBON
Material Sole: TPU

Extremely light anatomic and ergonomic single-piece carbon-made soft, pliable sole flex chassis construction with directly integrated NNN compatible Classic toe & heel plate. The chassis construction provides maximum longitudinal stability, superior responsiveness, and power transmission by the foot to the ski, with "FREE-FEET" & adaptable heel pocket construction for minimum heel stress and optimal foot fit.

ALPINA ELITE SKATE ONE-PIECE FULL CARBON with integrated split Skate sole

Material Chassis: FULL CARBON
Material Sole: TPU

Extremely light anatomic and ergonomic single-piece carbon-made stiff sole flex chassis construction with integrated NNN compatible Skate toe & heel plate. The chassis provides maximum longitudinal stiffness and lateral stability, superior lateral responsiveness, and power transmission by foot to the ski, with "FREE-FEET" & adaptable heel pocket construction for minimum heel stress and for optimal foot and ankle fit.

ALPINA PRO CLASSIC

Material: Carbon + Pebax insert and TPU

New Special-made outsole for classic technique, the pivot point, NNN compatible, moved for 10 mm to the front direction for better and more efficient thrust, improved ski-to-snow contact. Thin layer design for the lightness of the sole, with low cut heel cleats construction and 90-degree oriented front cleats design for optimal sole, soft flex characteristic.

ALPINA PRO SKATE

Material: Carbon + Pebax insert and TPU

New Special-made outsole for skate running technique. A thin layer design offers the lightness of the sole, with high cut heel cleats construction and 45-degree oriented front cleats design for optimal sole, stiff flex characteristic. The pivot point, NNN compatible, slightly moved to the back directly under the big toe to support a more efficient and decisive thrust.

ALPINA PULSE

Material: TPU

Pulse soles are made to match NNN binding system. Provides good stability and stance position both on skate and classic style boots.

ROTTEFELLA T4

Material: TPU

T4 sole offers good power transmission, comfortable, softer flex, and good walkability.

BC XPLORE

Material: TPU and Rubber Sole

The Rottefella Xplore™ Backcountry sole is anti-skid, flexible, and stable. The rotation point is moved backward as close to the front as possible for better mobility and comfort, giving a more natural walking feeling.

ROTTEFELLA BC

Material: TPU

Backcountry NNN compatible sole with optimum support in rugged terrain, reliable walking thanks to non-slip profile.

75 MM

Material: TPU

Standard 75 mm sole, provides excellent support in rugged terrain, non-slip profile with specially made rubber mixture. Tourer free 75 and Alaska 75 use Vibram brand soles.

FLEX

The skating technique demands a stiff flex sole, while the classic technique requires soft flex sole characteristics in the shoe metatarsal area. The Skate design also employs stiff flex parts and materials. In contrast, the Classic and Combo/Doubleton type shoe designs employ soft flex parts and materials that deliver maximum power and control. Backcountry and Double poling (DP) shoes employ a medium flex sole and components to deliver a more flexible, accommodating ski experience.

MIDSOLLES

With midsoules, we are defining the shoe's flex, feel and power characteristics. Midsoules give you the power to reach the speed while staying stable. They can give you the extra feel when running classic technique in challenging snow conditions or the power while sprinting for first place. Various materials and shapes of midsoules are used to find the perfect characteristics we are looking for in every shoe.

	MATERIAL	STIFFNESS	WEIGHT
ALPINA ELITE SKATE	Carbon and PEBAX (World cup Technology)	HARD	ULTRA LIGHTWEIGHT
ALPINA ELITE CLASSIC	TPU (World cup Technology)	SOFT	ULTRA LIGHTWEIGHT

ALPINA TEMPO SKATE	Glass fibers and TPU	HARD	LIGHTWEIGHT
ALPINA TEMPO CLASSIC	TPU	SOFT	LIGHTWEIGHT
ALPINA JR TOURING	TPU	ULTRA SOFT	LIGHTWEIGHT
ALPINA JR RACING SKATE	TPU	MEDIUM	LIGHTWEIGHT
ALPINA JR RACING CLASSIC	TPU	SOFT	LIGHTWEIGHT

ANATOMY AND INNOVATION

INNER SHOE

FIT

The design and shape of the internal 'soft' part of the shoe provide optimum grip. The narrow Race cut to the broader Comfort fit, and, the range is rounded out with the Dynamic medium fit that falls between two extremes. All fit configurations take into consideration higher and lower variations in foot form.

LACING

ALPINA DIAMOND LACING

A braid angle of 45° relative to the longitudinal direction of the shoe improves the torsional stability of the soft part of the shoe. This ensures a tight fit between the shoe and the foot in the rotation phase of the shoe toward the inner side when skiing the skating technique. It also improves the torsional stability of the overall shoe and helps deliver power to the user.

ALPINA PRIME LACING

A braid angle of 90° relative to the longitudinal direction of the shoe provides maximum grip in the instep and ensures a tight fit between the boot and the heel when skiing the classical technique to the user.

FOOTBED

ALPINA ORTHOLITE

Alpina OrthoLite insole technology creates a thermal barrier that elevates footwear temperature regulation to an unprecedented level, infusing open-cell PU foam with a proprietary aerogel creating the lightest, most advanced version of the world's most insulative material delivering unmatched thermal insulation and all-day comfort and cold weather protection underfoot.

ANATOMIC

Anatomic insole contributes significantly to the vertical stability of the foot, providing a high level of comfort and improving the thermal insulation of the shoe, and keeping your feet dry.

ALPITEX MEMBRANE

Material: PU Membrane
The Alpitem membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions.

THINSULATE INSULATION

"Thinsulate" insulation provides up to twice as much thermal shoe insulation. It provides the foot maximum thermal comfort even under icy and high-humidity conditions.

ALPINA IGLOO

Material: Felt
Advanced use of insulation provides the foot with maximum thermal comfort.

GAITERS

Gaiters cover the shoe and lower leg entirely and protect against cold, water, moisture, and snow. Gaiters are elastic and adaptable in shoe instep to different foot shapes. On the one hand, gaiters are water-tight but, on the other hand, also breathable in the instep area of the shoe.

ALPINA ELITE GAITER

Material: Polyester and TPU foil

Ultra-light thin-layer elastic Polyester-made gaiters combine breathability and water tightness. It improves the lightness of the shoe. The inside side is equipped with thin PU foil to prevent water and moisture penetration and absorption, while the instep area is free of any foil to ensure breathability. Gaiters are equipped with elastic tape for gaiter adaptability to various leg shapes.

ALPINA PULSE GAITER

Material: PVC and Neoprene

Made out of PVC, it enables strength, lightweight, elasticity, and high durability, while NEOPRENE maintains good flexibility over a wide temperature range and offers good insulation against both water and temperatures.

ALPINA VARIO

The Elastic tape inserts on our high-end 2023/24 models for gaiter adaptability to various leg shapes.

ALPINA 4DRY

Material: Polyester and TPU Membrane

"4DRY" stands for an innovative system made from bi-elastic PES textile material laminated with a membrane that allows the boot water impermeable and allows it to breathe. The material feels light and is hydrophobic, whisking away water and moisture to maximize comfort and ensure a dry and warm foot.

HEEL COUNTERS

Heel counters made out of different types of materials used with "FREE-HEEL" construction ensure optimal torsional stability of the boots and excellent grip and foothold for any heel volumes or foot shapes.

ALPINA ELITE CLASSIC

Material: Full CARBON

Significantly light our most advanced WORLD CUP technology. It improves the torsional stability of the boot and provides excellent grip and foothold in the heel. The "FREE-HEEL" construction reduces heel pressure and adapts to various types of heel and heel shapes.

ALPINA ELITE SKATE

Material: Full CARBON

Significantly light our most advanced WORLD CUP technology. It improves torsional stability and ankle support of the boot and provides excellent grip and foothold in the heel. The "FREE-HEEL" construction reduces heel pressure and adapts to various types of heel and foot shapes.

ALPINA PRO

Material: Carbon and PEBAX

A perfect blend of the above materials is used on the exterior of the boot construction to reduce the weight of the boot, consequently increasing its functionality and durability of the boot. The PRO heel counter is solid and durable. It ensures better torsional stability and stance position.

ALPINA COMP

Material: Carbon and TPU

Premium thermoplastic polyurethane heel counter with a high level of stiffness and low weight, provides a good grip and a stable foothold in the heel. "Free heel" construction adapts to the various foot shapes and heel volumes.

ALPINA TEMPO

Material: TPU

Thermoplastic polyurethane heel counter provides a good grip and a stable foothold in the heel. "Free heel" construction adapts to the various foot shapes and heel volumes.

ALPINA TERMO MOLDED

Material: PVC

The use of different thicknesses, densities, and shapes of PVC material, takes the shape of the foot and adapts to it with repeated use.

CUFFS

The skating technique requires more lateral ankle support for improved performance. So the boot has an external rivet or screw-fixed cuff, which provides rigidity and lateral stability to the ankle to gain better responsiveness with optimal grip. All cuffs are anatomically and ergonomically designed and employ a Velcro power strap and EVA padding.

ALPINA ELITE SKATE

Material: FULL CARBON

The anatomic cuff is exceptionally light and delivers maximal stiffness and superior lateral responsiveness. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

ALPINA PRO

Material: CARBON AND PEBAX

Materials allow exterior boot construction to reduce the weight of the boot, consequently increasing the functionality and durability of the boot. The PRO Cuff is solid and durable. It ensures better torsional stability and stance position.

ALPINA ELITE RS

Material: CARBON AND TPU

The anatomic cuff, developed and designed for the best roller-ski performance, is exceptionally light and delivers maximal stiffness and superior lateral responsiveness. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

ALPINA TEMPO

Material: TPU

Provides good stiffness and lateral stability, while the EVA padding and a power strap provide superior comfort and adjustable ankle grip.

CUFF SHAPES

The skating technique requires more lateral ankle support, while COMBI and shoes for double poling (DP) need just the right amount for improved performance. Due to those reasons, we have two upper cuff shapes so that we can meet the desires of every cross-country skier.

ALPINA COMBI

The Combi cuff shape is a bit lower, mid-cut construction, compared to the traditional skate cuff shape offering the right amount of support for different use of a shoe. It will help the skier feel stable at any given moment while giving you enough freedom for stress-free classic skiing techniques.

ALPINA SKATE

The traditional skate anatomic cuff developed and designed for best performance. Is light and delivers maximal stiffness and superior lateral responsiveness. This cuff provides the comfort and support you need for skating technique. The power strap ensures optimal ankle fit and adjustable ankle grip. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

CHALLENGE. EVERY DAY.
choice of champions

Elite 3.0 Our boots have crossed finish lines and crowned champions. These achievements humble us, and we strive to transfer winning experience into every product we design. Discover the winner in you and join the Alpina family.

ELITE 3.0

ULTRA LIGHT CARBON CONSTRUCTION, ULTRA HIGH PERFORMANCE

The world's lightest, most responsive ski boots are changing the way we ski – and win.

TORSIONAL STABILITY

ESK 3.0

The single-piece all-carbon anatomic skate chassis features extremely light, "hard" sole flex and delivers superior lateral responsiveness and maximum longitudinal stiffness and stability. Carbon cuff-to-heel counter hinge construction delivers ultralight, maximal stiffness, minimal rotational hinge friction and optimal ankle fit.

ECL 3.0

An extremely light anatomic, single-piece carbon chassis with pliable sole flex and adaptable heel pocket delivers maximum longitudinal stability and superior responsiveness and power transmission. As a result the skier maintains correct body posture and effective equilibrium body position while running.

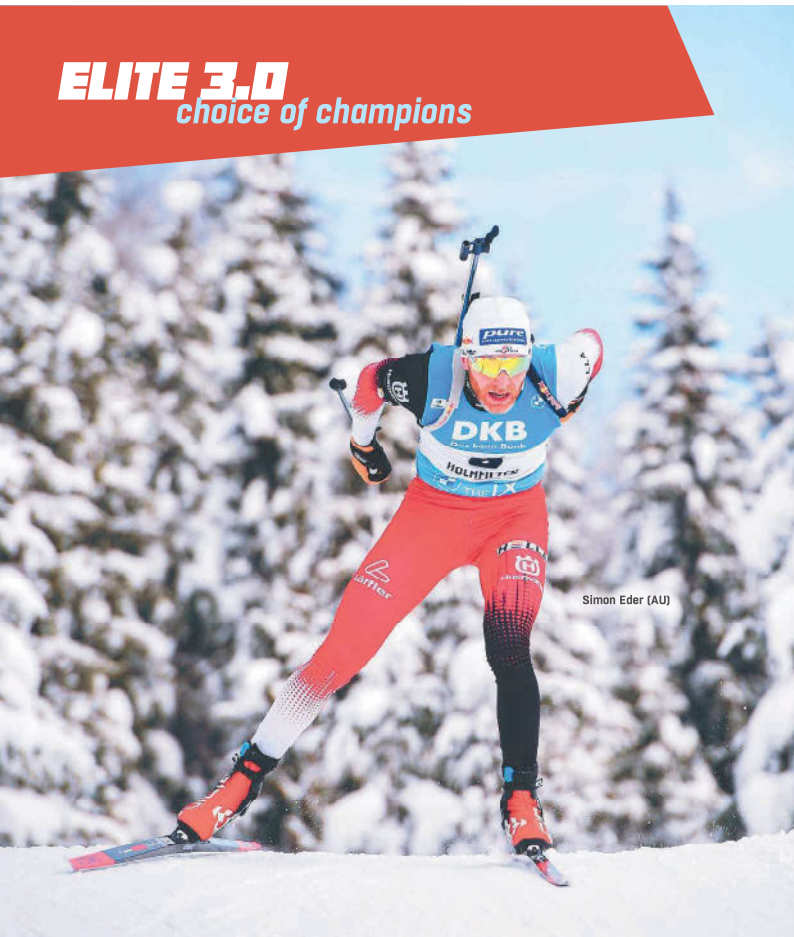

FREE FEET

Free Feet construction virtually eliminates heel stress, providing the skier maximum comfort.

A mere second can separate losers from champions. For that winning edge, we designed the new ELITE 3.0 SKATE. Lighter than its predecessors, it offers the best weight to functionality ratio of any boot currently on the market. Built firmly with full carbon cuffs and breathable gaiter resting upon an anatomic footbed, this boot holds a tight grip on the foot, supporting it laterally and torsionally even on steeper terrain and through sharp turns.
